

MED CHECK SCHEDULE

Patients currently taking medication for ADHD are required to be seen by a provider for a med check **four times a year, two visits in-office and two televisit checkins,** by the average schedule modeled below.

Patients who are starting a new medication or dosage should be seen for their first med check follow up within 30 days of the new prescription, as modeled by the schedule below.

Please note that refill requests will not be processed for patients who have not been seen for a med check within 90 days. To avoid delays in receiving med refills, please schedule your next appointment well in advance.
